Preliminary Limits for Junction Jam Detection:

FP_A: 40

FP_B: 3

FP_C: 5

FP_D: 15

KR Circle: 20

KG Road: 15

District Office: 10

Anand Rao: 6

Race Course: 10

Palace Road: 20

Additional Condition:

An average speed of 0.1 is used to determine junction jam.

We can categorize it a jam if a junction has avg queue length more than the threshold here and avg speed < 0.1

After simulating we found jams as shown:

Per-Minute Average Traffic Count per Junction

Distribution of Jam Occurrences Throughout the Day

Correlation between Queue and Speed for Each Location
